Troubleshooting a DROP Power Issue

If you are no longer getting a green LED when putting in a new battery, the issue might be related to some corrosion on the board underneath the battery. Here is a quick tip to try to see if you can restore the power on the DROP.

Open the battery door and take out battery

Find some Isopropyl Alcohol.

Using a soft cloth or Q-Tip and alcohol gently clean the board under the battery.

Wait for alcohol to dry and reinsert battery.
